

**LISTING OF CLAIMS**

*dial up access  
content Information*

1-19. Withdrawn

20. (Previously Presented) A method for providing information to users via communications devices associated with said users, said method comprising the steps of:

receiving a digits request trigger from said communication devices, wherein the digits request trigger is a signaling message that is associated with a call set-up process, the digits request trigger comprising dialed digits or a feature code, whereby a communications network attempts to establish a call connection between a user that initiates the digits request trigger and a called number associated said dialed digits or feature code;

retrieving information corresponding to said digits request trigger; and

sending said retrieved information to said communication devices for display to said users.

21. (Previously Presented) The method of claim 20 wherein said retrieving step further comprises the steps of:

identifying users associated with said digits request trigger;

correlating said digits request trigger with specific information requests for said users;

and

retrieving said specific information.

22. (Previously Presented) A system for providing information to a wireless network subscriber in response to digits request trigger or SMS origination message, comprising:

means for receiving said digits request trigger from said wireless network, wherein the digits request trigger is a signaling message that is associated with a call set-up process, the digits request trigger comprising dialed digits or a feature code, whereby a telecommunications network attempts to establish a call connection between a user that initiates the digits request trigger and a called number associated said dialed digits or feature code;

means for retrieving data corresponding to said digits request trigger; and

means for sending said retrieved data to a user who initiated said digits request trigger.

23. (Previously Presented) The system of claim 22 further comprising:  
means for correlating said digits request trigger to requested data.

24. (Previously Presented) The system of claim 23 wherein said correlating means accesses a user profile database to identify said requested information for a particular digits request trigger.

25. Withdrawn

26. (Previously Presented) An information system for a wireless network comprising:  
a wireless web information services gateway coupled to said wireless network and capable of receiving digits request triggers from said wireless network, wherein the digits request trigger is a signaling message that is associated with a call set-up process, the digits request trigger comprising dialed digits or a feature code, whereby a telecommunications network attempts to establish a call connection between a user that initiates the digits request trigger and a called number associated said dialed digits or feature code;  
means for correlating digits request triggers to requested information;  
means for retrieving said requested information; and  
means for sending said requested information to subscribers on said wireless network.
